Office Action Summary

Application No.

09/686,123

Applicant(s)

GERNERT ET AL.

Examiner

George C Neurauter, Jr.

Art Unit

2143

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 12 June 2003.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 27-29 and 35-51 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 27-29 and 35-51 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☒ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
- Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
- 11) ☐ The proposed drawing correction filed on _____ is: a) ☐ approved b) ☐ disapproved by the Examiner.
- If approved, corrected drawings are required in reply to this Office action.
- 12) ☐ The oath or declaration is objected to by the Examiner.

Priority under 35 U.S.C. §§ 119 and 120

- 13) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. _____.
3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
- * See the attached detailed Office action for a list of the certified copies not received.
- 14) ☐ Acknowledgment is made of a claim for domestic priority under 35 U.S.C. § 119(e) (to a provisional application).
- a) ☐ The translation of the foreign language provisional application has been received.
- 15) ☐ Acknowledgment is made of a claim for domestic priority under 35 U.S.C. §§ 120 and/or 121.

Attachment(s)

- 1) ☒ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☐ Information Disclosure Statement(s) (PTO-1449) Paper No(s) _____
- 4) ☐ Interview Summary (PTO-413) Paper No(s) _____
- 5) ☐ Notice of Informal Patent Application (PTO-152)
- 6) ☐ Other:

DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 12 June 2003 has been entered.

Specification

2. The disclosure is objected to because of the following informalities:

The Applicant indicated in the amendment filed 12 June 2003 that all instances of "kernal" were changed to "kernel". However, in view of page 4 of the amendment, it appears that the Applicant has merely deleted the word "kernal" from the specification.

Appropriate correction is required.

Response to Arguments

3. Applicant's arguments with respect to claims 27-29 and 35-51 have been considered but are moot in view of the new ground(s) of rejection.

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the

Art Unit: 2143

applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

5. Claims 27 and 37 are rejected under 35 U.S.C. 102(e) as being anticipated by Seazholtz et al. [US Patent 5 737 706 A].

Regarding claim 27, Seazholtz discloses a method for communication between a mobile computer terminal and a host computer in a system in which it is necessary in order to avoid being disconnected for the mobile computer terminal to send a message to the host computer, including the steps of: determining a particular time at which the mobile computer terminal is to send the message to the host computer; programming a timer or clock to wake up the mobile computer terminal so that the mobile computer terminal can send the message at said particular time; entering the mobile computer into a sleep mode; waking up the mobile computer terminal due to the programming of the timer or clock; and sending the message at said particular time. [column 3, line 53-column 4, line 3; column 8, line 22-column 9, line 51, specifically column 8, lines 22-63 and column 9, lines 37-51]

Claim 37 is also rejected since claim 37 contains substantially the same limitations as recited in claim 27.

Claim Rejections - 35 USC § 103

6. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

7. The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

8. This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

9. Claims 28, 35, 38, and 40 are rejected under 35 U.S.C. 103(a) as being unpatentable over Seazholtz et al. in view of Lim et al. [US Patent 5 884 024 A]

Regarding claim 28, Seazholtz discloses the method of claim 27.

Seazholtz does not disclose wherein said system is a system utilizing the limited leasing of IP addresses and said message is a message begging for more time, however, Seazholtz does disclose that the system is substantially similar to other systems that are well known and used in the art that are used for, *inter alia*, assigning

Art Unit: 2143

addresses to mobile computers or client computers [column 5, line 53-column 6, line 9; column 7, lines 10-33].

Lim discloses that a system that utilizes the limited leasing of IP addresses wherein messages are sent to beg for more time are well known and used in the art in the context of the substantially similar systems as disclosed within Seazholtz [column 1, line 62-column 2, line 14].

Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to have to combine the teachings of Seazholtz and Lim since one of ordinary skill in the art would have known and routinely used the well-known subject matter disclosed in Seazholtz and Lim, which is expressly shown in view of the disclosures of Seazholtz and Lim, and combining the disclosures of both references would have involved only routine skill in the art.

Claim 38 is also rejected since claim 38 contains substantially the same limitations as recited in claim 28 and is subject to the same motivations regarding the obviousness of claim 28.

Regarding claim 35, Seazholtz and Lim disclose the method of claim 27.

Seazholtz does not expressly disclose wherein said message is a lease renewal message, however, Lim discloses that this limitation is well known and used in the art in the context of wireless transmission systems as described in Seazholtz as described above regarding claim 27 [column 2, lines 12-14].

Claim 35 is rejected since the motivations regarding the obviousness of claim 27 also apply to claim 35.

Claim 40 is also rejected since claim 40 contains substantially the same limitations as recited in claim 35 and is subject to the same motivations regarding the obviousness of claim 35.

10. Claims 29, 36, 39, and 41 are rejected under 35 U.S.C. 103(a) as being unpatentable over Seazholtz et al. and Lim et al. as applied to claims 28 and 38 above, and further in view of Emerson et al. [US Patent 4 775 996 A].

Regarding claim 29, Seazholtz and Lim disclose the method of claim 28.

Seazholtz and Lim do not expressly disclose determining if the mobile computer is out of range of communications with the host computer or displaying a message on the mobile computer indicating to the user that the mobile computer must be brought back into range of communications with the host computer or else said leased IP address may be forfeited, however, Lim also discloses the concept of IP leasing in the context of wireless transmission systems as described above regarding claim 28.

Emerson discloses that the concept of determining if a mobile computer is out of range of communications with a host computer and displaying a message on the mobile computer indicating to a user that the mobile computer must be brought back into range of communications with the host computer is well known and used in the art in the context of wireless transmission systems [column 1, lines 11-38, specifically lines 29-38].

It would have been obvious to one of ordinary skill in the art at the time the invention was made to display a message on the mobile computer indicating to the user that the mobile computer must be brought back into range of communications with the

host computer or else a leased IP address may be forfeited since one of ordinary skill in the art would have known and routinely used the well-known subject matter as disclosed in Emerson. In view of the combined disclosures of Seazholtz and Lim as described in claim 28, combining the methods disclosed in Emerson with using a timer or clock as described in Seazholtz to determine whether the IP address lease is about to expire as described in Lim would have involved only routine skill in the art.

Claim 39 is also rejected since claim 39 contains substantially the same limitations as recited in claim 29 and is subject to the same motivations regarding the obviousness of claim 29.

Regarding claim 36, Seazholtz, Lim, and Emerson disclose the method of claim 29.

Seazholtz, Lim, and Emerson do not disclose the method further including the step of resetting said timer or clock for a next scheduled beg time if the mobile computer is out of range of communications with the host computer, however, Seazholtz does disclose resetting said timer or clock for a next scheduled beg time [column 8, line 64-column 9, line 51] and Emerson discloses determining if the mobile computer is out of range of communications with a base unit or host computer [column 1, lines 11-38, specifically lines 29-38].

Claim 36 is rejected since the motivations regarding the obviousness of claim 29 also apply to claim 36.

Claim 41 is also rejected since claim 41 contains substantially the same limitations as recited in claim 36 and is subject to the same motivations regarding the obviousness of claim 36.

11. Claims 42 and 47 are rejected under 35 U.S.C. 103(a) as being unpatentable over the Applicant's admitted prior art [US Patent 5 029 183 A to Tymes] in view of Seazholtz et al.

Regarding claim 42, the Applicant's admitted prior art discloses a mobile computer terminal including: a communications module for communication with a base unit or host computer in a system; a hand-held image scanner; a processor; and a memory having stored therein program instructions for reading by the processor such that the mobile computer terminal performs the steps of: reading an image by said hand-held scanner; transforming data corresponding to the image read, the transformed data to be transferred from the mobile computer terminal for eventual entry into a database; sending the transformed data to a base unit or host computer according to coordinated data formatting and ordering between the mobile terminal and the base unit or host computer [column 2, line 55-column 3, line 57; column 6, lines 28-56; column 11, line 25-column 12, line 8].

The Applicant's admitted prior art does not expressly disclose determining a particular time at which the mobile computer terminal is to send a message to the base unit or host computer to avoid being disconnected; programming a timer or clock to wake up the mobile computer terminal so that the mobile computer terminal can send the message at said particular time; entering the mobile computer terminal into a sleep

mode; and waking up the mobile computer terminal from the sleep mode due to the programming of the timer or clock to send the message at the particular time, however, Seazholtz discloses that these limitations are well known and used in the art in the context of wireless transmission systems [column 3, line 53-column 4, line 3; column 8, line 22-column 9, line 51, specifically column 8, lines 22-63 and column 9, lines 37-51].

Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to use Applicant's admitted prior art with the disclosures of Seazholtz since one of ordinary skill in the art would have known and routinely used the well known subject matter disclosed in Seazholtz. Since the Applicant admits the mobile computer terminal as known prior art, combining the mobile computer terminal with the disclosures of Seazholtz would have involved only routine skill in the art.

Claim 47 is also rejected since claim 47 substantially contains the same limitations as recited in claim 42 and is subject the same motivations regarding the obviousness of claim 42.

12. Claims 43, 45, 48, and 50 are rejected under 35 U.S.C. 103(a) as being unpatentable over the Applicant's admitted prior art and Seazholtz et al. as applied to claims 42 and 47 above, and further in view of Lim et al.

Regarding claim 43, the Applicant's admitted prior art and Seazholtz disclose the mobile computer terminal of claim 42.

The Applicant's admitted prior art and Seazholtz do not disclose wherein said system is a system utilizing the limited leasing of IP addresses and said message is a message begging for more time, however, Seazholtz does disclose that the system is

substantially similar to other systems that are well known and used in the art that are used for, *inter alia*, assigning addresses to mobile computers or client computers [column 5, line 53-column 6, line 9; column 7, lines 10-33].

Lim discloses that a system that utilizes the limited leasing of IP addresses wherein messages are sent to beg for more time are well known and used in the art in the context of the substantially similar systems as disclosed within Seazholtz [column 1, line 62-column 2, line 14].

Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to have to combine the teachings of the Applicant's admitted prior art, Seazholtz, and Lim since one of ordinary skill in the art would have known and routinely used the well-known subject matter disclosed in Seazholtz and Lim, which is expressly shown in view of the disclosures of Seazholtz and Lim. Since the Applicant admits the mobile computer terminal as claimed in claim 42, the combination of these references with the admitted prior art would have involved only routine skill in the art.

Claim 48 is rejected since claim 48 contains substantially the same limitations as recited in claim 43 and is subject to the same motivations regarding the obviousness of claim 43.

Regarding claim 45, the Applicant's admitted prior art and Seazholtz disclose the mobile computer terminal of claim 42.

The Applicant's admitted prior art and Seazholtz do not disclose wherein said message is a lease renewal message, however, Lim discloses that this limitation is well

known and used in the art in the context of wireless transmission systems as described in Seazholtz as described above regarding claim 43.

Claim 45 is rejected since the motivations regarding the obviousness of claim 43 also apply to claim 45.

Claim 50 is also rejected since claim 50 contains substantially the same limitations as recited in claim 45 and is subject to the same motivations regarding the obviousness of claim 45.

13. Claims 44, 46, 49, and 51 are rejected under 35 U.S.C. 103(a) as being unpatentable over the Applicant's admitted prior art, Seazholtz et al, and Lim et al. as applied to claims 43 and 48 above, and further in view of Emerson et al.

Regarding claim 44, the Applicant's admitted prior art, Seazholtz, and Lim disclose the mobile computer terminal of claim 43.

The Applicant's admitted prior art, Seazholtz, and Lim do not expressly disclose wherein the mobile computer terminal comprises the memory having stored therein further program instructions for reading by the processor such that the mobile computer terminal performs the further steps of: determining if the mobile computer is out of range of communications with the base unit or host computer; and displaying a message on the mobile computer indicating to the user that the mobile computer must be brought back into range of communications with the base unit or host computer or else said leased IP address may be forfeited, however, Lim also discloses the concept of IP leasing in the context of wireless transmission systems as described above regarding claim 43.

Emerson discloses that the concept of determining if a mobile computer is out of range of communications with a host computer and displaying a message on the mobile computer indicating to a user that the mobile computer must be brought back into range of communications with the host computer is well known and used in the art in the context of wireless transmission systems [column 1, lines 11-38, specifically lines 29-38].

It would have been obvious to one of ordinary skill in the art at the time the invention was made to display a message on the mobile computer indicating to the user that the mobile computer must be brought back into range of communications with the host computer or else a leased IP address may be forfeited since one of ordinary skill in the art would have known and routinely used the well-known subject matter as disclosed in Emerson. In view of the combined disclosures of Seazholtz and Lim as described in claim 43, combining the methods disclosed in Emerson with using a timer or clock as described in Seazholtz to determine whether the IP address lease is about to expire as described in Lim would have involved only routine skill in the art. Since the Applicant admits the mobile computer terminal as claimed in claim 42, the combination of these references with the admitted prior art would have also involved only routine skill in the art.

Claim 49 is also rejected since claim 49 contains substantially the same limitations as recited in claim 44 and is subject to the same motivations regarding the obviousness of claim 44.

Regarding claim 46, the Applicant's admitted prior art, Seazholtz, Lim, and Emerson disclose the mobile computer terminal of claim 44.

The Applicant's admitted prior art, Seazholtz, Lim, and Emerson do not expressly disclose the memory having stored therein further program instructions for reading by the processor such that the mobile computer terminal performs the further step of: resetting said timer or clock for a next scheduled beg time if the mobile computer is out of range of communications with the base unit or host computer, however, Seazholtz does disclose resetting said timer or clock for a next scheduled beg time [column 8, line 64-column 9, line 51] and Emerson discloses determining if the mobile computer is out of range of communications with a base unit or host computer [column 1, lines 11-38, specifically lines 29-38].

Claim 46 is rejected since the motivations regarding the obviousness of claim 44 also apply to claim 46.

Claim 51 is also rejected since claim 51 contains substantially the same limitations as recited in claim 46 and is subject to the same motivations regarding the obviousness of claim 46.

Conclusion

14. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

The following prior art discloses systems and methods similar in scope to the Seazholtz reference:

US Patent 705 952 A to Seazholtz et al;

US Patent 5 805 997 A to Farris;

US Patent 5 920 821 A to Seazholtz et al.

The following prior art discloses systems and method regarding displaying messages to a wireless computer user stating an out of range condition, defined in class 455, subclass 421:

US Patent 5 373 548 A to McCarthy;

US Patent 5 809 414 A to Coverdale et al;

US Patent 5 867 782 A to Yoon.

The following prior art discloses methods regarding sleep modes:

US Patent 5 355 518 A to Kindinger et al.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to George C Neurauter, Jr. whose telephone number is 703-305-4565. The examiner can normally be reached on Mon-Fri 9am-5:30pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, David Wiley can be reached on 703-308-5221. The fax phone numbers for the organization where this application or proceeding is assigned are 703-746-7239 for regular communications and 703-746-7238 for After Final communications.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is 703-746-7240.
